Senior Software Engineer

Role Overview

Tutis is looking for an exceptional fullstack java software engineer.

The person we are seeking is passionate about working in teams to deliver outstanding product solutions and has at least 5 years java/sql software engineering experience.

The role will suit someone looking for an exciting and challenging career role working within a collaborative and innovative team environment. Tutis offers an attractive remuneration package and flexible working conditions.

Tutis is a developer of cloud based solutions delivered under a managed service model. It has expertise in building, marketing, delivering and supporting compliance and training management solutions for large enterprises and for Registered Training Organisations. Tutis services companies throughout Australia and is now also operating in New Zealand.

This role is in the team creating Tutis' next generation of Compliance Solutions.

Tutis Operations operates out of well-appointed offices in the Brisbane CBD. This role reports to the Product Manager.

To apply please email your resume to hello@tutis.com.au attention of the Talent Manager.

Coding Skills, Practices and Standards

The person in this role is required to be competent in the programming languages used by Tutis and conversant with standard industry practices. They should have a broad understanding of various coding methodologies, testing practices, and tools and know when to apply each method to achieve the desired outcomes.

The Tutis Development Team utilises an Agile development process based on Extreme Programming. They are expected to be knowledgeable in the implementation of Agile principles, and are required to actively participate in scrum and team meetings.
